DAB-Repeater-System

We are an major cold store all-round service provider for international companies that want to have their products packaged, chilled, frozen and/or stored. Many of our employees work in chilled-storage rooms (-25° C).

In our facility our employees did not have any FM- or DAB radio-reception. The lack of day-light and any no radio-broadcasts had led to less favourable working conditions. As a result, we had more absences and sickness cases than we would normally have.

We have decided to enable DAB radio reception with a repeater system for our employees. The Sumatronic DAB repeater works very fine, and we are very satisfied about the installed system. We now have radio coverage in our complete building, including the coldstore areas. We are also satisfied with the planning and the local partner (Basecom BV), proposed by Sumatronic, that installed the system, and they have also installed a repeater system for our mobile phones.

We are convinced that we have made a very good choice, which brings us as a company as well as our employees pleasure and benefits. We have received very good and comprehensive advice and support and can highly recommend the products and services.

Kind regards
Grolleman Coldstore b.v.
